AN ISO-9001:2015 QUALITY CERTIFIED COMPANY

## MATERIAL CERTIFICATION

June 22, 2023

**Ashley Barragan**

Ashley,

This is to certify that expanded metal and expanded metal grating products manufactured by New Metals, Inc. conform to both ASTM F1267-18 and EMMA 557-18 product specification standard. As this letter is provided as a blanket certification of conformance, additional manufacturing variances and tolerances may apply. Certain expanded metal mesh products may not be covered by either specification and mutually agreed upon deviations may exist.

Expanded metal products supplied as hot dipped galvanized comply to ASTM A123. The primary function of the hot-dipped galvanized process is to provide corrosion resistance. While efforts will be made to supply an aesthetic appearance to the galvanized finish, no guarantee as to the visual appearance of the finish will be offered or should be implied and the presence of any white rust, ash, flaking, discoloration, clumping or any other condition that does not affect corrosion resistance will not be grounds for rejection.

Perforated metal products produced by New Metals, Inc. conform to the Industrial Perforators Association's "Designers, Specifiers and Buyers Handbook of Perforated Metals" product specification standards.

Upon request, MTR's for raw materials (coil) can be provided. For stock material shipped from mill inventory, the documentation may only be representative and time frame approximated since specific heat traceability may not be achievable.

Final determination of the suitability of any information or material for the use contemplated, and its manner of use, is the sole responsibility of the user.

Sincerely yours,

New Metals, Inc.
